

*Body*

*Buttock Lift*

Buttock lifts are done through incisions that are usually concealed in the panty line. A segment of skin and fat is removed from the posterior hip and lower back area, and sagging buttock skin is lifted and recontoured. This can be added to with the lateral thigh lift by combining the incisions.

If you should have any other questions about the procedure or surgery, please call the office at (281) 286-1000.
